

Technical Solutions Engineer

Location: Pune, Bangalore

Company Description

Arista Networks is an industry leader in data-driven, client-to-cloud networking for large data center, campus and routing environments. Arista is a well-established and profitable company with over \$5 billion in revenue. Arista's award-winning platforms, ranging in Ethernet speeds up to 800G bits per second, redefine scalability, agility, and resilience. Arista is a founding member of the Ultra Ethernet consortium. We have shipped over 20 million cloud networking ports worldwide with CloudVision and EOS, an advanced network operating system. Arista is committed to open standards, and its products are available worldwide directly and through partners.

At Arista, we value the diversity of thought and perspectives each employee brings. We believe fostering an inclusive environment where individuals from various backgrounds and experiences feel welcome is essential for driving creativity and innovation.

Our commitment to excellence has earned us several prestigious awards, such as the Great Place to Work Survey for Best Engineering Team and Best Company for Diversity, Compensation, and Work-Life Balance. At Arista, we take pride in our track record of success and strive to maintain the highest quality and performance standards in everything we do.

Job Description

Who You'll Work With

The TSE works in a non-silo environment, supporting all of Arista's products and the many *network* protocols and features covered by EOS. He or she will work directly with both the customer and (when needed) the software and hardware development teams. The TSE team also performs all their own tests and analysis in a dedicated lab environment.

Giving customers direct access to a high-level engineer streamlines the support process and raises customer satisfaction.

What You'll Do

- Collaborate with customers to troubleshoot and debug industry-wide network protocols, software and hardware issues, and provide the best solutions.
- Resolve customer concerns raised during deployment, operation, maintenance, product application or compatibility matters.
- Interpersonal skills and product knowledge and expertise are critical to responding to daily customer-centric activities.
- Document customer communication and recurring technical issues to support product quality programs and product development.

Qualifications

- Bachelor in CS/IT/CIS/ECE or equivalent in experience
- Working knowledge of networking industry, products, technologies and protocols such as:

- AAA/RADIUS/TACACS, ACL, ARP, BGP (RFC 4271), DHCP, DNS, 1G/10G Ethernet (IEEE 802.3ab & IEEE 802.3ae), Flow Control, ICMP, IGMP, IPv4 & IPv6, LACP, LLDP, MPLS, NAT, Open Flow, OSPF (RFC 2328), PIM, PoE (IEEE 802.3.af/at/bt) QOS, RIP, Sflow, SNMP, STP/RSTP/MST (IEEE 802.1d), VARP/VRRP, VLAN (IEEE 802.1q), LACP, VLANs (IEEE 802.1Q), MAC Learning, VXLAN, EVPN and GRE
 - RF fundamentals, -Wireless clients and drivers, -Wireless security (WPA2, WPA3)
 - Authentication frameworks EAP, PEAP, EAP-TLS, AAA/RADIUS/TACACS
- Experience with packet capture/analysis tools is highly desired.
- A strong comfort level with Linux is highly desired.
- Familiarity with programming/scripting (C++, Java, Python, Perl, JavaScript, Bash) is a plus
